## Education

Bachelor of Computer Science

September 2013 - April 2017 (Expected)

Carleton University, Ottawa, Ontario

- Software Engineering Stream
- Currently in Third Year standing, 9.1/12 CGPA (B+)

## Availability

- Available full time or part-time starting September 2015, open to extending work term.

## Technical Skills

- Proficient in Java, C, C++, Python, JavaScript, HTML, CSS, Ruby, and WordPress.
- Working co-op experience in HTML, CSS, MySQL, JS, and PHP.
- Engineered a web portal using PHP, HTML5, CSS, and JavaScript with a MySQL back-end to link server side and client side. Using the MVC framework I developed alongside one other colleague a fully functional online solutions portal allowing fellow coworkers to increase efficiency ultimately increasing company efficiency.
- Programmed in JavaScript/HTML to create a set of virtual 2d games allowing me to grasp web development architecture, readily available on my GitHub portfolio
- Created an encryption program using the Linux environment and Virtual Box alongside C based programming to allow encrypting of sentences, and decrypting previously encrypted messages

## Work Experience

**Junior Systems Administrator**

May 2014- August 2014

Department of National Defense, Ottawa, ON

- Conducted query based analysis to coordinate schedules, and meetings alongside consulting with clients.
- Lead the way to the creation of Blackberry support documentation which ultimately increased work efficiency.
- First point of contact IT support which included creating tickets and getting computers or servers back online immediately once issues arise.

**Software Engineering Intern**

April 2015 – Present

Forrest Green, Ottawa, ON

- Using PHP and PHP Storm as an IDE alongside other languages like HTML5, CSS, JavaScript, and MySQL lead development to increase company efficiency via the creation of an online portal named Work Management Solutions. Forrest Green has higher internal communication levels due to Project, Task, and Notes being efficiently managed in an online GUI between customers, clients, internal divisions, and partners. The project is publicly available for viewing at [staging.forrestgreen.com/wms](http://staging.forrestgreen.com/wms).
- Oversaw the entire product life cycle, including meeting with clients to documenting project development requirements. Developing the product, and shipping it. This gave me a full-blown view beyond just the development of a product; ultimately benefiting me in future endeavors.
- Integrated efficiently into a small company using Subversion (SVN) to update, and commit online repositories to allow efficient collaboration from home, and office workspaces.
